Welcome

Government of Catalonia

Smart digital technologies will be the cornerstone of twenty-first century economies. In this new paradigm, Catalonia has the assets and the ability to accommodate the expansion of this new industry, and to become one of the prime movers in this new model of a digitalisation-based society, which will revolutionise not only the business fabric, but also the way in which we currently understand health, education, the management of cities and even culture. All the sectors of our economy and all areas of our lives are increasingly affected by digitalisation. This means industry 4.0, the Internet of Things (IoT), big data, the cloud and artificial intelligence.

Catalonia has always been a country that is open to the world, to trading contacts, cultural exchanges, and to creation and innovation. Indeed, two centuries ago it was one of the regions involved in the industrial revolution in Europe; a region that was able to articulate its strengths to lead the way in that paradigm shift, despite its lack of abundant natural resources. That tradition has given Catalonia strong industrial foundations in the present day, with great potential and strong technological capabilities which place it in an excellent position to lead this new industrial revolution, one of the new major challenges for the society of the future.

The Internet of Things Solutions World Congress is an event promoted by this Government, which takes its place alongside the Mobile World Congress, the world's most important technology and business congress, the Smart City Expo World Congress, which places Catalonia at the international centre of smart cities, and the recently established In3Dustry, which will make this country a benchmark in additive manufacturing.

The Internet of Things Solutions World Congress includes the participation of private sector bodies, Fira de Barcelona and leading cutting-edge companies from all over the world with which we hope to contribute to the development of the IoT in industry, business, SMEs and technology centres. It is a shared challenge and a path we can travel together. Catalonia will be the meeting point.

Mr. Carles Puigdemont i Casamajó

President of the Government of Catalonia

Catalonia Trade & Investment

We are the Catalan Government public agency for business competitiveness and foreign investment attraction. The 36 Trade and Investment Offices advise and help international companies invest or expand their operations in Catalonia and Barcelona.

ICT + Industry = Industry 4.0

Catalonia has significant assets, primarily industrial muscle (20% of the GDP) and a powerful ICT sector (with over 12,800 companies). These two aspects are key to developing Industry 4.0. In Catalonia local and foreign companies (Seat, HP, Oracle, Alstom, Worldsensing, Effitronix, Avinent or Fundiciones de Roda) and world-class technological and research centres (EURECAT and TECNIO) are currently putting 4.0 technologies into practice.

Founded in 2007, Accent Labs is a company focused on turning customers ideas into tailored electronic solutions, from product development to mass production.

Our main business is the wireless device market, specially in Bluetooth, Wifi, Sigfox, GPRS/3G/4G-LTE and other technologies like the emerging NB-IoT. We have a wide expertise developing Internet of Things (IoT) and Machine to Machine (M2M) solutions.

The company has also specialized in beacon technology. Since 2013, when this technology burst into the market, Accent Labs has become one of the iBeacon and Eddystone manufacturers leaders in the world.

In Ackstorm, with over 14 years of experience in Systems Management and Integration, we are experts in Architecture Design, Implementation and 24x7 Management of Cloud Platforms for companies where internet is a critical channel for their business.

Our experience in Cloud Architectures and Systems, together with the development of our Multi-Provider Cloud Management System, facilitates the migration of Online Business to the Cloud, obtaining an improved service, flexibility and scalability in infrastructures, and reducing costs by pay per use.

In AEINNOVA we generate electricity from the waste heat helping to improve the energy efficiency of industry reducing the emissions and power wireless sensor network devices, aligned with industry 4.0. We can monitor in real time any industrial parameter without batteries (self-powered by waste heat) and free of maintenance (using thermoelectricity, same technology used in Space applications).

Our technology is easy to adapt to any hot surface, heat pipe, chimney, etc.

We combine Energy Harvesting technologies, with wireless sensor networks and Fiware Big Data.

LEITAT

Contact

Marta Domper
mdomper@leitat.org

Internet of Things Partners S.L. (IoT partners) is a consultancy and engineering services provider in the IoT domain. Our services are mainly oriented to the acceleration of technical projects through consulting, prototype design, team training, and development of critical parts of projects. We provide an extensive experience in research and development of professional projects, system design Hw-Sw-Fw and rapid prototyping. Our first versatile platform, based on LWPAN technology (SIGFOX, LoRa, IoT-NB) allows the implementation of IoT solutions for smart cities, metering, retail, logistics, tracking and any other IoT domain.

LEITAT is a non-profit Spanish Research Technology Organisation recognised by the Catalan Government and by the Spanish Ministry of Science and Innovation. LEITAT develops R&D activities with deep knowledge and experience in technological transfer to several industrial sectors. LEITAT has 9 R&D divisions: Advanced Materials, Biomedical engineering, Devices, Design & Engineering, Environmental & Bio Technologies, Human & Environmental Health & Safety, Fast Moving Consumer Goods, Environmental Unit, Tribology, and the Scientific Technical Services. Each of the divisions is set up by multidisciplinary teams with know-how and experience in different knowledge areas and disciplines. Our technological solutions in the areas of transport, health, energy, manufacturing, security and environment.

Range anxiety is the main concern within EV (Electric Vehicle) drivers. Current charging points' maps are not enough to mitigate this fear of having insufficient range since charging points can be out of order or a specific card can be needed to charge. **Place to Plug offers a platform to solve these problems**, allowing EV drivers to **know the charging points' status and to activate them** from a smartphone. The platform also offers **access to private charging points** (hotels, restaurants or individuals) allowing users to charge even where no public charging points exist.

Keywords: electric vehicle, charging stations, collaborative platform, app, sustainability, sustainable transport, transport, mobility, sustainable mobility.

PROMAUT GROUP was formed in 1995 to offer technological solutions in industrial processes using: Conceptual Design, Engineering, PLC's and robot programming, Manufacturing execution system, and implementation of productive processes.

The main activity sectors are Automotive, Industry 4.0, Railway, Chemical and Aeronautical. From PROMAUT's creation we have supported innovation through collaboration with clusters and organisations, giving birth to PROMAUT investees.

These companies arriving from PROMAUT have helped to diversify growth thanks to the high professionalization and specialization of the new business initiatives.

Key Words: Open Innovation, Industry 4.0, MES, Smart Cities, Automation Systems, Robotics, Automotive, Internet of things.

The **Internet of Things (IoT)** is an emerging sector with great potential for economic growth and employment generation. Currently, only 1% of things are connected, but it is expected that by 2020 there will be 50 billion Internet-connected devices worldwide, which represents about 7 devices per person.

The **IoT Catalan Alliance** is promoted by the Generalitat of Catalonia as one of the initiatives within the **SmartCAT** strategy to promote this new sector in our country. The alliance consists of a group of companies and organizations that develop and implement technological solutions in IoT.

The constitution of this group provides a great environment for the key players of this industry to define a common action plan to **promote IoT in Catalonia**.

The objectives of the alliance are:

- Identifying the companies and organizations that develop activities in this area
- Exploring the abilities and needs of alliance members
- Encouraging the exchange of information and synergies creation among members
- Providing visibility and business opportunities for all stakeholders in the value chain
- Working on behalf of the sector in the Administration or standardization institutions

Join us:

Are you a company, institution or research center whose activity focuses on the Internet of Things? Are you based in Catalonia? Want to be part of an association with more than 50 companies and research institutions that offers a meeting point to exchange information with other companies? Want to join the IoT Catalan Alliance?

Currently being a member of the IoT Catalan Alliance has no associated cost and the main requirements are attending the events and contributing use cases and news to the alliance's website.

Send an email to info@cataloniaiot.com and we will contact you to get all the necessary information to become a member.
