# Welcome

Government of Catalonia

In recent years, Catalonia and Barcelona have become established as reference points in the smart management of the efficiency and sustainability of cities and territory. Barcelona's status as host, once again and for the fifth time running, of the Smart City Expo World Congress clearly demonstrates the favourable international positioning of our territory and of our companies.

In just a very short time, this congress has become the benchmark event for industries associated with smart cities. This is a very dynamic sector that is becoming consolidated worldwide and, in Barcelona and Catalonia, has found a first-rate showcase for in-depth exploration of future trends in the sector.

Areas such as technology, governance, sustainability, mobility and innovation are becoming increasingly important against a background in which intelligent use of information and communication technologies is essential for the economies of the twenty-first century and has a huge impact and repercussion on the public's quality and model of life.

In a traditionally industrial environment, Catalonia has technology centres, innovative companies and start-ups that have been set up to operate globally, have outstanding growth potential and are attractive to foreign investors. This catalogue contains information on over 50 Catalan companies that are attending this Congress and that clearly demonstrate the capacities of the Catalan business fabric involved in ICTs and smart cities.

A year ago the Government of Catalonia approved smartCAT, a strategy for turning Catalonia into a smartRegion and a smart territory of international renown. This Congress therefore has a very important role in this task and I hope that it helps to boost the smart, sustainable and integrating economic growth of our territory and reinforce the competitiveness of our industry, while encouraging the creation of intelligent solutions for the efficient management of cities, mobility and society at large.

**Welcome**

Barcelona City Council

Welcome to the fifth edition of the Smart City Expo World Congress, a meeting point for enterprises, professionals and administrations, a place for thinking and debating about the future of our cities and a space for the promotion of economic activity.

A smart city works on improving the quality of life of its citizens and guarantees a sustainable social, economic and urban development. It is a city that backs innovation and the use and modernisation of the new technologies so as to achieve a more efficient management of the services and resources of the city, ensuring that this reverts to an improvement in the quality of life. The smart Barcelona is a city for living: that reduces inequalities, is more human, that empowers its citizens and that takes care of the environment, by avoiding pollution and by not wasting resources and energy. Furthermore, it is committed towards a model which is economically, socially and environmentally sustainable.

That's why Barcelona is a smart city and community and one which has wanted to provide support to its business fabric, and by helping them to be present in this Trade Fair.

The City Council of Barcelona - through Barcelona Activa – participates with a corporate stand along with 20 SMEs, so as to facilitate the presence and visualisation of the most innovative projects from the sector that are being developed in the city and for the improvement of the quality of life of its citizens.

The participating enterprises and organisations are: AticSer, Avancar, Bit4id, Connecthings Iberica, Ctrl4 Enviro, DocWolves, Datalong, Ecobam, Eixverd, Equilibrium, FAD, Itequia, Mass Factory, Omega Peripherals, Opentrends, Sinapse, Sitecno, Smart Luminia, Zicla and Aplicacions Electricques ENE

Their activity is an example of the wide range of products and services and applications within the sector of urban innovation, with a notable impact on the improvement of the quality of life of the citizenship and its social return, as well as integrating elements of urban ecology and sustainability.

We invite you to visit them, and hope that you very much enjoy this event.

**Agustí Colom**

*Councillor for Employment, Enterprise and Tourism, Barcelona City Council*

---

High-tech company spin-off of the UAB following final project of 7 students led by PhD Jordi Roig with the aim to create innovative products adding value to Society.

The first objective, the mobile App OnTheBus, Public Transport planner, was the first service developed, following Universal Design principles and including proprietary turn by turn navigator so accurate that groups with reduced mobility including elderly, cognitively and even visually impaired can use it.

OnTheBus became App&Town Going with you, multimodal, multiplatform and with collaborative intelligence.

Compagnon, System to plan Public Transport routes and guide and keep track of people with cognitive disabilities.

---

Citizens seek to get pertinent information and services that is often hard to find while walking in a city.

**Connecthings'** solution provides the perfect answer to create a new media in cities, engaging an audience with the right information at the right time in the right place. For example, just approach your everyday bus shelter with your mobile to access next arrival schedules and multi-modal options through real-time notification!

Connecthings delivers AdTag™, a SAAS platform that links physical and digital worlds using mobile technologies (iBeacon, NFC tag, QR codes, Wifi) providing context aware mobile services. This infrastructure can be "open" as an interactive hub so that an ecosystem of public and private apps can interact with the cities and make them, smarter, more resilient and interconnected. This is what we call "THE INTERNET OF PUBLIC THINGS".

Sensing, monitoring and environmental control

**Ctrl4** Enviro deploys sensors to monitor the environment, while it uses the gathered information to automate processes. Among sensors, it develops its own ones based upon the analysis of thermal images. From the detection and measurement of a polluting gas to the long-range counting of people, Ctrl4 Enviro processes and serves information to actuators, databases and to any suitable device of the final user.

During Mercè 2015 Fests, it has provided to Barcelona City Council the information of the number of accesses to La Ciutadella and Montjuïc venues, processed by its own computer vision algorithms.
